FORTRA

Why Vera?
Powerful Data Protection, Anywhere

Designed for Flexiblity, Adoption, and Compliance

The Vera™ platform enables businesses of all sizes to protect any kind of data, and then track, audit and manage the policies securing files in real-time, no matter how far they travel. Our belief is that it is possible to secure confidential data no matter what device, person, cloud or application it travels to, even if it falls into the wrong hands. We make it effortless to securely collaborate with anyone, no matter which tools they choose to use - email, Box, Dropbox, or file shares.

Protect Any Thing, Anywhere

Your company needs a security solution without artificial limitations - security that can adapt to any kind of data, in any environment, and across multiple platforms. One of Vera's unique advantages is that our platform is 100% agnostic to platform, content, and storage. And Vera does not store customer data, meaning teams are free to use the tools they trust best, on Windows, Mac, or mobile. This approach allows Vera to easily support application updates and patches seamlessly, with no disruption to IT or end users. There are also no dedicated viewers, plugins, or additional software required to view documents protected by Vera. Managed devices are provided with a small, non-invasive client that makes the encryption and decryption of data invisible to the end user. Individual users without the client have immediate, secure access to files through a standard web browser.

Finally, Vera is built with modern web and application standards in mind. Vera applications and any data secured by Vera is not dependent on outdated proprietary technology, like Flash. When a Vera customer secures a document, that data will be accessible to any verified user on any device, no matter what. Vera will work with your content well into the future.

Encrypt, view, and share files from any device, desktop or mobile	Consistent experience on Windows, Mac, iOS, and Android	Invisible client, with no browser or plugin support required	Zero friction, works with any storage, any service, and built on modern technology

So Simple, Everyone Will (Gladly) Use It

The fundamental flaw in most security software is usability. Too often, these solutions force people to completely change their behavior to use the tools. They create alternative paths to simple tasks, like sending an email attachment or collaborating with an outside partner. Even security practitioners and IT pros are put at a disadvantage. Complex configurations encourage users to simply stop using the software and choose less secure options.

At Vera, we believe it shouldn't take five minutes to explain how to send a secure email. Securing data with Vera is as easy as attaching a file to an email. Users can quickly define granular permissions without walking through a 10-step form, and admins can build rules that automatically secure every file when it's shared.

And, this experience should be just as simple for a recipient. If receiving secured information is frustrating or unintuitive, collaboration grinds to a halt, and security tis often compromised in the name of getting work done. With Vera, your partners and customers can receive, view, and collaborate on files as easily as you can

🙂 Fast and flexible. Security that works within each user's workflow

🛠 No limitations. Use any tool, any storage, any data, without impacting productivity

🎚 Smart defaults. Put rules in place to secure any

🖱 Just use it. Get started in 30s or less with email, files and protection

Innovative Security that Adapts

Vera can adapt and improve its platform faster than more traditional, restricted providers.

Built on a scalable, easy-to-integrate platform, Vera attaches encryption, security and policy directly to the data itself, giving security practitioners and IT teams the power to control it, no matter where it goes. Our goal is to make it possible for everyone to create, collaborate and communicate freely, without fear.
