

Simeon Cloud – automated Microsoft 365 configuration management

Streamline your M365 and Intune environments with precision and confidence

With thousands of settings and policies across M365, Azure AD, Intune, and other Microsoft services, maintaining best practices manually is an overwhelming and error-prone process.

A single oversight can expose the organization to significant security vulnerabilities and cyber threats. Manual management does not scale, leading to inefficient use of IT resources and delayed response to critical updates or changes.

Without automated monitoring, configurations can drift from the established baseline over time, leading to inconsistencies and potential breaches in policy enforcement.

Simeon Cloud offers a powerful and innovative solution for managing Microsoft 365 and Intune environments. With its Configuration as Code platform, Simeon Cloud ensures that your tenant configurations are consistent, secure, and compliant!

Benefits

- **Enhanced security:** Close security gaps and prevent unauthorized access with policy-as-code
- **Reduced downtime:** Prevent operational consequences of misconfiguration, saving significant costs
- **Regulatory compliance:** Meet requirements of HIPAA, CIS, NIST, and CMMC, avoiding fines and penalties
- **Efficient management:** Streamline M365 workloads and reduce manual tasks for IT teams

How it works

- 1 Save configuration as code in Azure
- 2 Establish a baseline for drift detection
- 3 Replicate configurations to new tenants with ease
- 4 Alert about changes
- 5 Rollback and restore

Highlights

- **Configuration as Code:** Automate the enforcement of configurations and maintain consistency across multiple tenants
- **Automated tenant sync and drift detection:** Proactively monitor configuration changes, identify drifts, and ensure compliance with industry standards
- **Lifecycle management:** Implement lifecycle automation for M365 environments, streamlining testing and change management

Introducing our new **tiered packages**

Simeon Cloud's new tiered packages - Essentials, Professional and Suite - represent a strategic shift towards a more tailored and scalable approach to Microsoft 365 configuration management. We understand that organizations evolve and so do their needs. This progression model aligns with different maturity stages, allowing you to select a package that perfectly fits your current requirements, with the flexibility to upgrade as you grow!

Package	Simeon Cloud Essentials	Simeon Cloud Professional	Simeon Cloud Suite
Management features	<ul style="list-style-type: none"> • Backup • Monitoring • Audit • Restore 	<ul style="list-style-type: none"> • Backup • Monitoring • Audit • Restore 	<ul style="list-style-type: none"> • Backup • Monitoring • Audit • Restore • Baselines/Compliance • Change Management (Dev, Test, Prod) • Integrations (Log Analytics and Power BI Reporting)
Number of tenants included	1	2	4
Supported platforms	<ul style="list-style-type: none"> • O365 • Azure AD 	<ul style="list-style-type: none"> • O365 • Azure AD 	<ul style="list-style-type: none"> • O365 • Azure AD • Intune
Success packages	Can be delivered with all success packages	Can be delivered with all success packages	Can be delivered with all success packages
Available add-ons	<ul style="list-style-type: none"> • Multiple Production Tenants • Multiple Non-production Tenants 	<ul style="list-style-type: none"> • Baselines/Compliance • Change Management (Dev, Test, Prod) • Integrations (Log Analytics and Power BI Reporting) • Multiple Production Tenants • Multiple Non-production Tenants 	<ul style="list-style-type: none"> • Multiple Production Tenants • Multiple Non-production Tenants

Selected features explained:

Backup: Securely save your tenant configurations to prevent data loss and facilitate quick recovery.

Monitoring: Continuously monitor the health and status of your configurations to detect potential issues early.

Audit: Review changes and activities for compliance and operational integrity.

Restore: Quickly revert configurations to a known good state to ensure stability and performance.

Baselines/Compliance: Establish and maintain standards for configurations to ensure compliance with regulatory requirements.

Change Management (Dev, Test, Prod): Manage and deploy changes across different environments with ease.

Premium Integrations (Log Analytics, Power BI Reporting): Gain deeper insights with powerful analytics and reporting capabilities.

"Simeon Cloud is crucial for our digital workplace and endpoint management. It enables vital governance for our Microsoft 365 environment. Since implementation, we've significantly reduced time spent on endpoint configurations and Intune app packages."

– Eric Levin, CTO, GCM Grosvenor

Why should I choose Simeon Cloud?

- ✓ You have full confidence in consistency between your environments
- ✓ You are not worried about sync and can backup and restore your configurations
- ✓ The process is simple and you don't need to spend hours of coding to achieve the desired state
- ✓ Managing complex policies and controls across your systems and environments has never been easier
- ✓ You are using best-in-class tooling used by highly regulated businesses and endorsed by Microsoft itself
- ✓ You proactively ensure adherence to various compliance frameworks (HIPAA, CIS, NIST, CMMC) and are not worried about hefty fines
